Until I realized it was really 5 bits per channel, which is roughly bad-ATM-screen quality.

And 8 bits is more typical -- it's literally baked into many file formats, like JPEG.. My post guys wanted to stay on the Mac platform, so we dealt with 8-bit displays (color wasn't a huge part of our workflow -- but 10 bit would've been nice).. But it was one of those head-smacking moments for a platform that was supposedly media-friendly.

Jul 5, 2018 - Autodesk announced Smoke 2015, which will be the last version you can buy.. Also, color depth can be reported both in bits-per-channel and total bit depth; a 10 bit-per-channel display is 30 bits of color information per RGB pixel, 10 each for red, green, and blue.. (Some of the confusion is probably intentional; I had a hardware partner brag about their '15 bit display,' which sounded very weird to me. [Screens For Mac Download](#)

The OS simply wouldn't support 10-bit display I know you could get it in Windows, and almost certainly in Linux with the correct voodoo.. But in other ways, it's just them catching up Until this update, there was no way to get 10-bit displays working with Apple products at all, even third-party monitors that were 10-bit capable. Those bits are still useful: they're the raw material for generating your 8-bit final image, so you don't get banding when adjusting color or exposure.. ) How much software fully supports the 10-bit Eizo or NEC displays on Windows these days? Do typical GPUs now support 10-bit color, or is it still only expensive workstation GPUs? My impression was that only a few niche applications have bothered (notably, Photoshop has had support for a few years), since 10-bit displays are so rare/expensive, but I'm not an expert.. Some crappy screens on consumer electronics can't even represent the full 8 bits per channel; 6 bits + dithering is sadly really common, even in screens that advertise themselves as 8/24-bit.. Pro cameras and software can usually handle higher bit depths -- 16 for DSLRs, 10-12+ for pro video cameras -- but you're probably not seeing it unless you've carefully set up your computer..
