FAQ

[Download Office Mac 2008 On Macbook Air](#)

- Early-2008 or newer Mac Pro, iMac, or MacBook Pro (MacPro 3,1 and 4,1, iMac 8,1 and 9,1, MacBook Pro 4,1, 5,1, 6,1, 7,1, 8,1, and 9,1)

- Late-2008 or newer MacBook Air or Aluminum Unibody MacBook (MacBookAir 2,1, MacBook 5,1)

- Early-2009 or newer Mac Mini or white MacBook (Macmini 3,1, MacBook 5,2)

- Early-2008 or newer Xserve (Xserve 2,1, Xserve 3,1)

Machines that ARE NOT supported:

- 2006-2007 Mac Pros, iMacs, MacBook Pros, and Mac Minis (MacPro 1,1 and 2,1, iMac 4,1, 5,1, 6,1 and 7,1, MacBook Pro 1,1, 2,1, and 3,1, Macmini 1,1 and 2,1)

- The 2007 iMac 7,1 is compatible if the CPU is upgraded to a Penryn-based Core 2 Duo, such as a T9300.

- 2006-2008 MacBooks (MacBook 1,1, 2,1 3,1 and 4,1)

- 2008 MacBook Air (MacBookAir 1,1)

- Note: Make sure SIP is disabled on the system you intend to install High Sierra on. If it's not or you're unsure, just boot into your Recovery partition of your currently installed copy of OS X, open Terminal, and run "csrutil disable". Please also note that SIP MUST remain disabled for as long as you run High Sierra. You will be warned and prompted to re-disable it if it does somehow become enabled. **It is important that you refrain from resetting the system's PRAM for any reason, as that will re-enable SIP.**

Things you'll need:

- A copy of the macOS High Sierra Installer App. This can be obtained from the Mac App Store using a machine that supports High Sierra, or by using the built-in downloading feature of the tool. In the Menu Bar, simply select "Tools > Download macOS High Sierra..."

- A USB drive that's at least 8 GB in size

- A copy of the tool - Download [here](#) (current version: 2.3.2)

- View changelog and download older versions [here](#)

Known issues:

- Unsupported WiFi modules in some systems. Macs that use the Broadcom BCM4321 WiFi module will not have functional WiFi when running High Sierra. A fix for this is to open up your machine and install a compatible WiFi card. Machines affected include some MacPro3,1, MacBook5,2, MacBookPro4,1, iMac8,1, Macmini3,1, and MacBookAir2,1 systems. Please note that not all these machines will have an unsupported card, this is just a list of machines known to have chined with that card in some configurations

The screenshot shows a web browser window at dosdude1.com displaying the macOS High Sierra Patcher website. The page lists supported and unsupported machines, requirements, and a download link. Below the website content, a screenshot of the 'macOS High Sierra Patcher' application is shown. The application's menu bar includes 'File', 'Options', 'Tools', 'Window', and 'Help'. The 'Tools' menu is open, showing a 'Download macOS High Sierra...' option. A pink arrow points from this menu item to the 'here' link in the requirements list on the website.

Supported machines:

- Early-2008 or newer iMac, MacBook Pro (MacPro 3,1 and 4,1, iMac 8,1 and 9,1, MacBook Pro 4,1, 5,1, 6,1, 7,1, 8,1, and 9,1)
- Late-2008 or newer MacBook Air or Aluminum Unibody MacBook (MacBookAir 2,1, MacBook 5,1)
- Early-2009 or newer Mac Mini or white MacBook (Macmini 3,1, MacBook 5,2)
- Early-2008 or newer Xserve (Xserve 2,1, Xserve 3,1)

Machines that ARE NOT supported:

- 2006-2007 Mac Pros, iMacs, MacBook Pros, and Mac Minis (MacPro 1,1 and 2,1, iMac 4,1, 5,1, 6,1 and 7,1, MacBook Pro 1,1, 2,1, and 3,1, Macmini 1,1 and 2,1)
- The 2007 iMac 7,1 is compatible if the CPU is upgraded to a Penryn-based Core 2 Duo, such as a T9300.
- 2006-2008 MacBooks (MacBook 1,1, 2,1 3,1 and 4,1)
- 2008 MacBook Air (MacBookAir 1,1)
